A study by psychologist J. Philippe Rushton found creativity to correlate with intelligence and psychoticism. Another study found creativity to be greater in schizotypal than in either normal or schizophrenic individuals. While divergent thinking was associated with bilateral activation of the prefrontal cortex, schizotypal individuals were found to have much greater activation of their right

A couple of years after that news and more stories of black and other minority progress on GCSEs, GL Assessment, an independent testing organization, published results of their Cognitive Assessment Tests (CAT), indicating the performance of different ethnic groups. The CAT, though given to children at age 11, is highly correlated with GCSE results at age 16.
